RISK & REWARD PROFILE

The risk/reward indicator shows the link between risk and potential return from an investment in the fund. The indicator is based on how the fund's value has changed over the past five years. As the fund has been in existence for less than five years, the indicator is based on historical market data, supplemented with the history of relevant comparison objects.

This fund comes under category 7, which means there is a high risk of ups and downs in the unit value. Category 1 does not mean the fund is risk-free. In time the fund may move to both the right and left on the scale. This is because the indicator is based on historical data that is no guarantee of future risk/return.

The fund belongs to category 7 because the forecast standard deviation (volatility) is expected to exceed 25%.

The value of the fund can go down as well as up and you may get back less than you invest.

The indicator reflects risk-taking of the most important risks in the fund. It does not show the risk for, e.g.:

Liquidity risk: In the event of extreme circumstances on the stock market, there is a risk of not being able to withdraw money from the fund within the set time.

Counterparty risk: The risk of losses due to a counterparty being unable to fulfil its obligations in accordance with the agreed terms, for example not delivering securities or cash and cash equivalents.

Operational risks: Delays and errors in processes, political decisions and government decisions etc. may adversely affect the fund.

Currency risk: As the fund invests globally, the value development of each share class is also affected by changes in value between currencies.
