## WHAT ARE THE RISKS AND WHAT RETURNS CAN I ACHIEVE?

### Risk indicator

The summative risk indicator provides guidance on the level of risk of this product compared to other products. It shows how likely it is that the product will decrease in value due to market developments. We have classified the product as level 6 out of 7, i.e. the second-highest risk class. This means that the fund has a high risk of increases and falls in the share value. The indicator primarily reflects increases and falls in the shares the fund is invested in. Risks that are not captured by the risk indicator include: Liquidity risk: In the event of extreme circumstances on the stock market, there is a risk of not being able to withdraw money from the fund within the set time. Counterparty risk: The risk of losses due to a counterparty being unable to fulfil its obligations in accordance with the agreed terms, for example not delivering securities or cash and cash equivalents. Operational risks: Delays and errors in processes, political decisions and government decisions etc. may adversely affect the fund. Currency risk: As the fund invests globally, the value development of each share class is also affected by changes in value between currencies. This product does not include any protection against future market performance. You may therefore lose all or part of your investment.
